SINCE 1986

MANHART GOLF GTI 290

GTI BY MANHART

With the change to the current model generation of the best-selling Golf, VW dared to take a relatively big step in terms of design: the front view in particular turned out to be quite extravagant. After some time to get used to it, however, the “eight” appears very handsome and dynamic, especially with a view to the particularly sporty variants GTI, GTE and GTD as well as the R.

Stock Brakes, Individually Tuning Options
Available Upon Request

INTERIOR

MANHART Sky Roof

EXTERIOR

MANHART Rear Diffuser
MANHART Roof Spoiler by Oettinger
MANHART Front Spoiler by Oettinger
MANHART Side Skirts by Maxton
MANHART Decal Set

MANHART PERFORMANCE

The GTI in the eighth model generation already has a remarkable 245 hp and 370 Nm ex works. The MANHART team nevertheless detected further optimization potential here and gave the two-litre turbo, four-cylinder of the hot hatch a power boost with the help of its in-house MHtronic module: This boosts the power unit – the name of the car already suggested it – to a whopping 290 hp and 425 Nm.

MANHART SUSPENSION & RIMS

Essential, visual adjustments that give the car an even more coherent and dynamic appearance, are undoubtedly the new wheels and the lowering: The latter is due to a set of H&R springs, which lower the body by 40 millimetres. The MANHART multi-spoke rims in Venturi style mounted under the wings have the dimensions 8x19 inches ET40, the mounted tyres measure 225/35ZR19.

MANHART EXTERIOR & INTERIOR

As a complementary visual refinement, MANHART installed an in-house diffuser at the rear and provided the black body of the Golf GTI 290 with some quite discreet but nevertheless effective decorative stripes in the typical GTI red. To round off the interior, an exclusive starry sky with countless small LEDs was installed as a headliner.

All facts concerning driving performance are approximations. They depend on vehicle-specified details such as vehicle type, equipment, curb weight, rear axle ratio, wheel-tire combination, transmission design and aerodynamic equipment of the individual vehicle. Information about performance increases and/or performance kits are average values. A margin of +/- 5% in performance gains should be taken into consideration. Information about the overall performance of the stock engines changed due to an increase in performance and/or performance kits is based on the manufacturer's information in the vehicle registration document, which in turn can deviate +/- 5%. MANHART Performance assumes no liability for additional under-performance of factory engines. The technical data can be changed at any time without notice.
